

1000BASE-BX SFP 1490nmTX/1310nmRX 20km DOM Transceiver

J9142B-20-LL

Application

- · Switch to Switch Interface
- Fast Ethernet
- Switched Backplane Applications
- Router/Server Interface
- Other Optical Links

Features

- Operating data rate Up to 1.25Gb/s
- Two types:

A:1310nm FP transmitter /1490nm receiver

B:1490nm DFB transmitter/1310nm receiver

• Up to 20km on 9/125μm SMF

- Hot-pluggable SFP footprint
- BIDI LC/UPC type pluggable optical interface
- Low power dissipation
- Metal enclosure, for lower EMI
- RoHS compliant and lead-free
- Support Digital Diagnostic Monitor interface
- Single +3.3V power supply

• Case operating temperature:

Commercial: 0° C ~ 70° C

Extended: -20° C $\sim 85^{\circ}$ C

Industrial: -40° C ~ 85° C

- Compliant with SFP MSA Specification
- Compliant with SFF-8472
- Compliant with IEEE 802.3z

Description

Longline J9142B-20-LLSFP transceiver is compatible with the Small Form Factor Pluggable Multi-Sourcing Agreement (MSA). The transceiver consists of five sections: the LD driver, the limiting amplifier, the digital diagnostic monitor, the 1310 nm FP laser (the 1490 nm DFB laser) and the PIN/TIA. The module data link up to $20 \, \text{km}$ in $9/125 \, \text{um}$ Single-mode fiber.

This transceiver meets the Small Form Pluggable (SFP) industry standard package utilizing an integral LC-Bi-dirictional optical interface connector. An enhanced Digital Diagnostic Monitoring Interface compliant with SFF-8472 has been incorporated into the transceiver. It allows real time access to the transceiver operating parameters such as transceiver temperature, laser bias current, transmitted optical power, received optical power and transceiver supply voltage by reading a built-in memory with I²C interface.

The optical output can be disabled by a LVTTL logic high-level input of TX Disable, and the system also can disable the module via I²C. TX Fault is provided to indicate that degradation of the laser. Loss of signal (LOS) output is provided to indicate the loss of an input optical signal of receiver or the link status with partner. The system can also get the LOS (or Link)/Disable/Fault information via I²C register access.

Product Specifications

I. General Specifications

| Parameter | Symbol | Min | Тур. | Max | Unit |
|---------------------------|--------|-----|------|------|---------|
| Bit Rate | BR | | | 1.25 | Gb/s ec |
| Max.Supported Link Length | Lmax | | | 20 | km |

II. Absolute Maximum Ratings

| Parameter | Symbol | Min | Тур. | Max | Unit | Ref. |
|------------------------------------|----------------|------|------|----------------------|--------|--------|
| Storage Temperature | T _s | -40 | | 85 | °C | |
| Storage Ambient Humidity | H _A | 5 | | 95 | % | |
| Power Supply Voltage | V_{CC} | -0.5 | | 4 | V | |
| Signal Input Voltage | | -0.3 | | V _{cc} +0.3 | V | |
| Receiver Damage Threshold | | +3 | | | dBm | |
| Lead Soldering Temperature/Time | T_{sold} | | | 260/10 | °C/sec | Note 1 |
| Lead Soldering Temperature/Time | T_{sold} | | | 360/10 | °C/sec | Note 2 |

Notes:

- 1. Suitable for wave soldering.
- 2. Only for soldering by iron.

III. Electrical Characteristics

| Parameter | Symbol | Min | Тур. | Max | Unit | Ref. | | |
|-----------------------------------|-----------------|------|----------------|----------------------|------|--|--|--|
| | | 0 | | 70 | | J9142B-20-LLF34(B43) (20)F 34(B43)- C | | |

Receiver (Rx)

| Input Optical Wavelength | λ_{IN} | 1440 1290 | 1490 1310 | 1540 1330 20)B43 | nm | J9142B-20-LLF34(B43) (20)F34 J9142B-20-LLF34(B43) (|
|----------------------------------|------------------|--------------|--------------|------------------------|-----|--|
| Receiver Sensitivity | P_{IN} | | | -23 | dBm | Note 3 |
| InputSaturation Power (Overload) | P _{SAT} | -3 | | | dBm | |
| Loss of Signal Assert | P_A | -45 | | | dBm | |
| Loss of Signal De- assert | P_{D} | | | -23.5 | dBm | Note 4 |
| LOS Hysteresis | P_D-P_A | 0.5 | | 6 | dB | |

Notes:

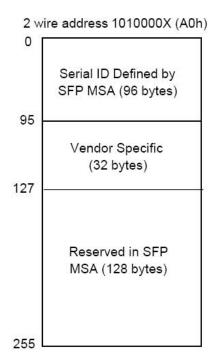

- 1. Measure at 2^7-1 NRZ PRBS pattern.
- 2. Transmitter eye mask definition.

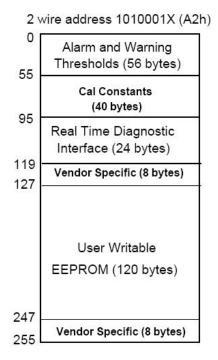

- 3. Measured with Light source 1490nm(1310nm), ER=9dB; BER = $<10^-12$ @PRBS= 2^7-1 NRZ.
- 4. When LOS De-asserted, the RX data+/- output is signal output.

V. Digital Diagnostic Memory Map

VI. Digital Diagnostic Monitoring Information

| Parameter | Unit | Accuracy |
|------------------|------|----------|
| Case Temperature | °C | ±3 |
| Supply Voltage | V | ± 3% |
| TX Bias Current | mA | ±10% |
| TX Optical Power | dB | ±3 |
| RX Optical Power | dB | ±3 |

VII. Pin Description

Notes:

- 1. Circuit ground is internally isolated from chassis ground.
- 2. TX Fault is an open drain output, which should be pulled up with $4.7K 10K\Omega$ resistor on the host board. Pull up voltage between 2.0V to VccT/R+0.3V. When high, output indicates a laser fault of some kind. Low indicates normal operation. In the low state, the output will be pulled to < 0.8V. When sensing an improper power level in the laser driver, the SFP sets this signal high and turns off the laser. TX-FAULT can be reset with the TX-DISABLE line. The signal is in LVTTL level.
- 3.TX disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with $4.7K 10K\Omega$ resistor. Its states are: Low (0 0.8V): Transmitter on; (>0.8, < 2.0V): Undefined; High (2.0V to VccT/R+0.3V): Transmitter Disabled; Open: Transmitter Disabled. The TX-DISABLE signal is high (LVTTL logic "1") to turn off the laser output. The laser will turn on when TX-DISABLE is low (LVTTL logic "0").
- 4. Should be pulled up with 4.7K $10K\Omega$ on host board to a voltage between 2.0V to VccT/R+0.3V. MOD_DEF (0) pulls line low to indicate module is plugged in.
- 5.LOS (Loss of Signal) is an open collector/drain output, which should be pulled up with $4.7K 10K\Omega$ resistor. Pull up voltage between 2.0V to VccT/R+0.3V. When high, this output indicates the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to < 0.8V. The RX-LOS is high (LVTTL logic "1") when there is no incoming light from the companion transceiver. This signal is normally used by the system for the diagnostic purpose. The signal is operated in LVTTL level.
