

# QSFP-DD 400GBASE-DR4+ 1310nm 2km Transceiver

QDD-4X100G-FR-LL

## Application

- 400G Ethernet
- Infiniband Interconnect
- Datacenter Enterprise Networking

## Features

- Compliant to QSFP-DD MSA
- Parallel 4 Optical Lanes
- 100G Lambda MSA 100G-FR Specification compliant
- Up to 2km transmission on single mode fiber (SMF) with FEC
- 8x53.125Gb/s electrical interface (400GAUI-8)
- Data Rate 106.25Gbps (PAM4) per channel
- Case temperature range: 0 ~ +70°C
- Maximum power consumption 12W
- MPO-12 connector
- RoHS compliant

## General Description

This product is a 400Gb/s Quad Small Form Factor Pluggable-double density (QSFP-DD) optical module designed for 2km optical communication applications. The module converts 8 channels of 50Gb/s (PAM4) electrical input data to 4 channels of parallel optical signals, each capable of 100Gb/s operation for an aggregate data rate of 400Gb/s. Reversely, on the receiver side, the module converts 4 channels of parallel optical signals of 100Gb/s each channel for an aggregate data rate of 400Gb/s into 8 channels of 50Gb/s (PAM4) electrical output data.

An optical fiber cable with an MTP/MPO-12 connector can be plugged into the QSFP-DD DR4 module receptacle. Proper alignment is ensured by the guide pins inside the receptacle. The cable usually cannot be twisted for proper channel to channel alignment. Electrical connection is achieved through a QSFP-DD MSA-compliant edge type connector.

The product is designed with form factor, optical/electrical connection and digital diagnostic interface according to the QSFP-DD Multi-Source Agreement (MSA) Type 2. It has been designed to meet the harshest external operating conditions including temperature, humidity and EMI interference.

## Functional Description

The module incorporates 4 parallel channels on 1310nm center wavelength, operating at 100G per channel. The transmitter path incorporates a quad channel EML driver together with 4 parallel EMLs. On the receiver path, a PD array is connected with a quad channel TIA to convert the parallel 400Gb/s optical input into 4 channels of parallel 100Gb/s (PAM4) electrical signals. A DSP basis gearbox is used to convert 8 channels of 25GBaud PAM4 signals into 4 channels of 50GBaud PAM4 signals and also an 8-channel retimer and FEC block are integrated in this DSP. The electrical interface is compliant with IEEE 802.3bs and QSFP-DD MSA in the transmitting and receiving directions, and the optical interface is compliant to QSFP-DD MSA with MPO-12 connector.

A single +3.3V power supply is required to power up this product. All the power supply pins are internally connected and should be applied concurrently. As per MSA specifications the module offers seven low speed hardware control pins (including the 2-wire serial interface): ModSelL, SCL, SDA, ResetL, InitMode, ModPrsL and IntL.

Module Select (ModSelL) is an input pin. When held low by the host, this product responds to 2-wire serial communication commands. The ModSelL allows the use of this product on a single 2-wire interface bus – individual ModSelL lines must be used.

Serial Clock (SCL) and Serial Data (SDA) are required for the 2-wire serial bus communication interface and enable the host to access the memory map.

The ResetL pin enables a complete reset, returning the settings to their default state, when a low level on the ResetL pin is held for longer than the minimum pulse length. During the execution of a reset the host shall disregard all status bits until it indicates a completion of the reset interrupt. The product indicates this by posting an IntL (Interrupt) signal with the Data\_Not\_Ready bit negated in the memory map. Note that on power up (including hot insertion) the module should post this completion of reset interrupt without requiring a reset.

Initialize Mode (InitMode) is an input signal. It is pulled up to Vcc in the QSFP-DD module. The InitMode signal allows the host to define whether the QSFP-DD module will initialize under host software control (InitMode asserted High) or module hardware control (InitMode deasserted Low). Under host software control, the module shall remain in Low Power Mode until software enables the transition to High Power Mode, as defined in the QSFP-DD Management Interface Specification. Under hardware control (InitMode de-asserted Low), the module may immediately transition to High Power Mode after the management interface is initialized. The host shall not change the state of this signal while the module is present. In legacy QSFP applications, this signal is named LPMMode. See SFF-8679 for LPMMode signal description.

Module Present (ModPrsL) is a signal local to the host board which, in the absence of a product, is normally pulled up to the host Vcc. When the product is inserted into the connector, it completes the path to ground through a resistor on the host board and asserts the signal. ModPrsL then indicates its present by setting ModPrsL to a “Low” state.

Interrupt (IntL) is an output pin. “Low” indicates a possible operational fault or a status critical to the host system. The host identifies the source of the interrupt using the 2-wire serial interface. The IntL pin is an open collector output and must be pulled to the Host Vcc voltage on the Host board.

## Product Specifications

### I. Absolute Maximum Ratings

It has to be noted that the operation in excess of any individual absolute maximum ratings might cause permanent damage to this module.

Parameter	Symbol	Min	Typ.	Max	Unit	Ref.
<b>Storage Temperature</b>	T <sub>s</sub>	-40		85	°C	
<b>Operating Case Temperature</b>	T <sub>OP</sub>	0		70	°C	
<b>Power Supply Voltage</b>	V <sub>CC</sub>	-0.5		3.6	V	
<b>Relative Humidity (non-condensation)</b>	RH	0		85	%	
<b>Damage Threshold, each Lane</b>	TH <sub>d</sub>	5.5			dBm	

### II. Recommended Operating Environment

Parameter	Symbol	Min	Typ.	Max	Unit	Ref.
<b>Operating Case Temperature</b>	T <sub>op</sub>	0		70	°C	
<b>Supply Voltage</b>	V <sub>CC</sub>	3.135	3.3	3.465	V	
<b>Data Rate, each Lane</b>			26.5625		GBd	PAM4
<b>Data Rate Accuracy</b>		-100		100	ppm	
<b>Pre-FEC Bit Error Ratio</b>				2.4x10 <sup>-4</sup>		
<b>Post-FEC Bit Error Ratio</b>				1x10 <sup>-12</sup>		1
<b>Link Distance</b>	D	0.002		2	km	2

#### Notes:

1. FEC provided by host system.
2. FEC required on host system to support maximum distance.

### III. Optical Characteristics

Parameter	Symbol	Min	Typ.	Max	Unit	Ref.
<b>Center Wavelength</b>	$\lambda_c$	1304.5	1310	1317.5	nm	
<b>Transmitter</b>						
<b>Modulation Format</b>		PAM4				
<b>Data Rate, each lane</b>		53.125±100 ppm			GBd	
<b>Side-mode Suppression Ratio</b>	SMSR	30			dB	
<b>Average Launch Power, each lane</b>	$P_{AVG}$	-2.4		4.0	dBm	1
<b>Outer Optical Modulation Amplitude (<math>OMA_{outer}</math>), each lane</b>	$P_{OMA}$	-0.2		4.2	dBm	2
<b>Launch Power in <math>OMA_{outer}</math> minus TDECQ, each Lane for <math>ER \geq 5dB</math> for <math>ER &lt; 5dB</math></b>		-1.6 -1.5			dB	
<b>Transmitter and Dispersion Eye Closure for PAM4, each Lane</b>	TDECQ			3.4	dB	
<b>TDECQ – <math>10 \cdot \log_{10}(Ceq)</math>, each Lane</b>				3.4	dB	3
<b>Extinction Ratio</b>	ER	3.5			dB	
<b><math>RIN_{21.4OMA}</math></b>	RIN			-136	dB/HZ	
<b>Optical Return Loss Tolerance</b>	TOL			17.1	dB	
<b>Transmitter Reflectance</b>	$R_T$			-26	dB	
<b>Transmitter Transition Time</b>				17	ps	
<b>Average Launch Power of OFF Transmitter, each Lane</b>	$P_{off}$			-15	dBm	

**Receiver**

<b>Modulation Format</b>	PAM4					
<b>Data Rate, each lane</b>		53.125±100 ppm			GBd	
<b>Damage Threshold, each Lane</b>	TH <sub>d</sub>	5.5			dBm	4
<b>Average Receive Power, each Lane</b>		-6.4		4.5	dBm	5
<b>Receive Power (OMA<sub>outer</sub>), each Lane</b>				4.7	dB	
<b>Receiver Sensitivity (OMA<sub>outer</sub>), each Lane</b>	SEN			Equation (1)	dBm	6
<b>Stressed Receiver Sensitivity (OMA<sub>outer</sub>), each Lane</b>	SRS			-2.5	dBm	7
<b>Receiver Reflectance</b>	R <sub>R</sub>			-26	dB	
<b>LOS Assert</b>	LOSA	-15			dBm	
<b>LOS De-assert</b>	LOSD			-9.4	dBm	
<b>LOS Hysteresis</b>	LOSH	0.5			dB	
<b>Stressed Conditions for Stress Receiver Sensitivity (Note 8)</b>						
<b>Stressed Eye Closure for PAM4 (SECQ), Lane under Test</b>				3.4	dB	
<b>SECQ – 10*log<sub>10</sub>(Ceq), Lane under Test</b>				3.4	dB	
<b>OMA<sub>outer</sub> of each Aggressor Lane</b>				4.7	dBm	

**Notes:**

1. Average launch power, each lane (min) is informative and not the principal indicator of signal strength. A transmitter with launch power below this value cannot be compliant; however, a value above this does not ensure compliance.
2. Even if the TDECQ < 1.4 dB for an extinction ratio of ≥ 4.5 dB or TDECQ < 1.3 dB for an extinction ratio of < 5 dB, the OMA<sub>outer</sub> (min) must exceed the minimum value specified here.
3. C<sub>eq</sub> is a coefficient defined in IEEE Std 802.3-2018 clause 121.8.5.3 which accounts for reference equalizer noise enhancement.
4. Average receive power, each lane (min) is informative and not the principal indicator of signal strength. A received power below this value cannot be compliant; however, a value above this does not ensure compliance.
5. The receiver shall be able to tolerate, without damage, continuous exposure to an optical input signal having this average power level.
6. Receiver sensitivity (OMA<sub>outer</sub>), each lane (max) is informative and is defined for a transmitter with a value of SECQ up to 3.4 dB. It should meet Equation (1), which is illustrated in Figure 4.

$$RS = \max(-4.5, SECQ - 5.9) \text{ dBm} \quad (1)$$

Where:

RS is the receiver sensitivity, and  
 SECQ is the SECQ of the transmitter used to measure the receiver sensitivity.

7. Measured with conformance test signal at TP3 for the BER equal to 2.4x10<sup>-4</sup>.
8. These test conditions are for measuring stressed receiver sensitivity. They are not characteristics of the receiver.

Figure 1. Illustration of Receiver Sensitivity Mask for 400G-DR4+

## IV. Electrical Characteristics

The following electrical characteristics are defined over the Recommended Operating Environment unless otherwise specified.

Parameter	Test Point	Min	Typ.	Max	Unit	Ref.
<b>Power Consumption</b>				12	W	
<b>Supply Current</b>	I <sub>cc</sub>			3.64	A	
<b>Transmitter (each lane)</b>						
<b>Signaling Rate, each Lane</b>	TP1	26.5625 ± 100 ppm			GBd	
<b>Differential pk-pk Input Voltage Tolerance</b>	TP1a	900			mV <sub>pp</sub>	1
<b>Differential Termination Mismatch</b>	TP1			10	%	
<b>Differential Input Return Loss</b>	TP1	IEEE 802.3-2015 Equation (83E-5)			dB	
<b>Differential to Common Mode Input Return Loss</b>	TP1	IEEE 802.3-2015 Equation (83E-6)			dB	
<b>Module Stressed Input Test</b>	TP1a	See IEEE 802.3bs 120E.3.4.1				2
<b>Single-ended Voltage Tolerance Range (Min)</b>	TP1a	-0.4 to 3.3			V	
<b>DC Common Mode Input Voltage</b>	TP1	-350		2850	mV	3
<b>Receiver (each lane)</b>						
<b>Signaling Rate, each Lane</b>	TP4	26.5625 ± 100 ppm			GBd	
<b>Differential pk-pk Output Voltage</b>	TP4			900	mV <sub>pp</sub>	
<b>AC Common Mode Output Voltage, RMS</b>	TP4			17.5	mV	
<b>Differential Termination Mismatch</b>	TP4			10	%	
<b>Differential Output Return Loss</b>	TP4	IEEE 802.3-2015 Equation (83E-2)				

<b>Differential Output Return Loss</b>	TP4	IEEE 802.3- 2015 Equation (83E-2)				
<b>Common to Differential Mode Conversion Return Loss</b>	TP4	IEEE 802.3- 2015 Equation (83E-3)				
<b>Transition Time, 20% to 80%</b>	TP4	9.5			ps	
<b>Near-end Eye Symmetry Mask Width (ESMW)</b>	TP4		0.265		UI	
<b>Near-end Eye Height, Differential</b>	TP4	70			mV	
<b>Far-end Eye Symmetry Mask Width (ESMW)</b>	TP4		0.2		UI	
<b>Far-end Eye Height, Differential</b>	TP4	30			mV	
<b>Far-end Pre-cursor ISI Ratio</b>	TP4	-4.5		2.5	%	
<b>Common Mode Output Voltage (Vcm)</b>	TP4	-350		2850	mV	3

**Notes:**

1. With the exception to IEEE 802.3bs 120E.3.1.2 that the pattern is PRBS31Q or scrambled idle.
2. Meets BER specified in IEEE 802.3bs 120E.1.1.
3. DC common mode voltage generated by the host. Specification includes effects of ground offset voltage.

## V. Digital Diagnostic Monitoring Information

The following digital diagnostic characteristics are defined over the normal operating conditions unless otherwise specified.

Parameter	Symbol	Min	Max	Unit	Ref.
<b>Temperature Monitor Absolute Error</b>	DMI_Temp	-3	3	°C	Over operating temperature range
<b>Supply Voltage Monitor Absolute Error</b>	DMI_VCC	-0.1	0.1	V	Over full operating range
<b>Channel RX Power Monitor Absolute Error</b>	DMI_RX_Ch	-2	2	dB	1
<b>Channel Bias Current Monitor</b>	DMI_Ibias_Ch	-10%	10%	mA	
<b>Channel TX Power Monitor Absolute Error</b>	DMI_TX_Ch	-2	2	dB	1

**Notes:**

1. Due to measurement accuracy of different single mode fibers, there could be an additional +/-1 dB fluctuation, or a +/- 3 dB total accuracy.

## VI. Pin Assignment

The electrical pinout of the QSFP-DD module is shown in Figure 2 below.

Figure 2. MSA Compliant Connector

Pin	Logic	Symbol	Description	Plug Sequence	Notes
1		GND	Ground	1B	1
2	CML-I	Tx2n	Transmitter Inverted Data Input	3B

69		Reseved	For future use	3A	3
70		GND	Ground	1A	1
71	CML-I	Tx7p	Transmitter Non-Inverted Data Output	3A	

72	CML-I	Tx7n	Transmitter Inverted Data Output	3A	
73		GND	Ground	1A	1
74	CML-I	Tx5p	Transmitter Non-Inverted Data Output	3A	
75	CML-I	Tx5n	Transmitter Inverted Data Output	3A	
76		GND	Ground	1A	1

**Notes:**

1. QSFP-DD uses common ground (GND) for all signals and supply (power). All are common within the QSFP-DD module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal common ground plane.
2. VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 shall be applied concurrently. Requirements defined for the host side of the Host Card Edge Connector are listed in Table 6. VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 may be internally connected within the module in any combination. The connector Vcc pins are each rated for a maximum current of 1000 mA.
3. All Vendor Specific, Reserved and No Connect pins may be terminated with 50 ohms to ground on the host. Pad 65 (No Connect) shall be left unconnected within the module. Vendor specific and Reserved pads shall have an impedance to GND that is greater than 10 Kohms and less than 100 pF.
4. Plug Sequence specifies the mating sequence of the host connector and module. The sequence is 1A, 2A, 3A, 1B, 2B, 3B. (see Figure 2 for pad locations) Contact sequence A will make, then break contact with additional QSFP-DD pads. Sequence 1A, 1B will then occur simultaneously, followed by 2A, 2B, followed by 3A, 3B.
